Project: Curtain rod

Where the marks go

MARKS

Inches. Across: measured left of the window frame. Up: above the top of the window frame.

Left bracket	6 in left of window · 4 in above
Right bracket	6 in right of window · 4 in above

SUMMARY

- Bracket to bracket: 48 in (4 ft) — the rod itself runs a bit past each bracket, so buy longer
- Brackets 4 in above the window frame (that's 84 in (7 ft) up from the floor)

Mark the height at ONE spot, then draw a level line across — floors aren't flat. Check each piece with the level as it goes up.

DumbLevel does math. It can't see inside your wall. Before you drill: check for wires and pipes (a detector is about $20), don't drill straight above or below an outlet or switch, and follow the instructions that came with your hardware.

Pro tip: measure twice, drill once.
